

CONTENTS

Preface	III
---------------	-----

CHAPTER I. THEORY OF VECTORS.

I. Operations on vectors.

§ 1. Preliminary definitions	1
§ 2. Components of a vector	2
§ 3. Sum and difference of vectors	3
§ 4. Product of a vector by a number	4
§ 5. Components of a sum and product	5
§ 6. Resolution of a vector	6
§ 7. Scalar product. Distributive law. Associative law. Square of a vector. Analytic representation of a scalar product	7
§ 8. Vector product. Change of order of factors. Associative law. Distributive law with respect to a sum. Components of a vector product	9
§ 9. Product of several vectors	12
§ 10. Vector functions. Limit. Continuity. Derivative. Vector functions of many variables	13
§ 11. Moment of a vector. Moment of a vector with respect to a point. Moment as a vector product. Moment of a sum of vectors having a common origin. Components of a moment. Moment of a vector with respect to a line	15

II. Systems of vectors.

§ 12. Total moment of a system of vectors	19
§ 13. Parameter	20
§ 14. Equipollent systems. Systems equipollent to zero. System of three vectors equipollent to zero	21
§ 15. Vector couple	23
§ 16. Reduction of a system of vectors. Reduction theorem. Table	23
§ 17. Central axis. Wrench	26
§ 18. Centre of parallel vectors	27
§ 19. Elementary transformations of a system	28

CHAPTER II. KINEMATICS OF A POINT.

I. Motion relative to a frame of reference.

§ 1. Time	32
§ 2. Frame of reference	32
§ 3. Motion of a point	33
§ 4. Graph of a motion	34
§ 5. Velocity. Velocity as a derivative of the path	34
§ 6. Acceleration. Uniform straight line motion. Hodograph	36

§ 7. Resolution of the acceleration along a tangent and a normal. Motion along a plane curve. Motion along a space curve. Uniform motion. Uniformly accelerated motion. Motion along a cycloid	39
§ 8. Angular velocity and acceleration. Angular velocity vector	45
§ 9. Plane motion in a polar coordinate system	46
§ 10. Areal velocity	47
§ 11. Dimensions of kinematic magnitudes. General definition of dimension. Determination of dimension	49

II. Change of frame of reference.

§ 12. Relation among coordinates. Motion along a helix	52
§ 13. Relation among velocities	56
§ 14. Relations among accelerations. Acceleration of Coriolis	59
§ 15. Determination of relative motion. Motion relative to a point.	65

CHAPTER III. DYNAMICS OF A MATERIAL POINT.

I. Dynamics of an unconstrained point.

§ 1. Basic concepts of dynamics. Inertial frame, absolute time. Mass and force. Material point.	69
§ 2. Newton's laws of dynamics. Laws of motion. Equilibrium of a point and forces. Force of inertia. D'Alembert's principle	71
§ 3. Systems of dynamical units. C. g. s. system. Measurement of masses and forces. Metric gravitational system of units. Dimensions of dynamical magnitudes	74
§ 4. Equations of motion	77
§ 5. Motion under the influence of the force of gravity. Vertical projection. Oblique projection	80
§ 6. Motion in a resisting medium. Vertical projection. Oblique projection ...	82
§ 7. Moment of momentum. Principle of conservation of areas	84
§ 8. Central motion. Binet's formula	85
§ 9. Planetary motions. Kepler's laws. Corollaries of Kepler's laws. Law of universal gravitation. Mass of the earth. Kepler's equation	87
§ 10. Work. Constant force. Variable force. Work of a sum of forces. Dimension and units of work	92
§ 11. Potential force field. Stress field. Lines of forces. Definition of a potential field. Potential. Dimension of the potential. Relation between force and potential. Potential surfaces	96
§ 12. Examples of potential fields. Constant field. Central field. Newtonian gravitational field. Axial field. Sum of potential fields	100
§ 13. Kinetic and potential energy	104
§ 14. Motion of a point attracted by a fixed mass. Motion along a conic. Motion along a straight line	106
§ 15. Harmonic motion. Simple harmonic motion. Table of position, velocity and acceleration of the point. Plane harmonic motion. Damped harmonic motion. Forced harmonic motion. Lissajous' curves	110
§ 16. Conditions for equilibrium in a force field. Stable equilibrium. Dirichlet's theorem	118

II. Dynamics of a constrained point.

§ 17. Equations of motions. Reaction. Equations of motion. Kinetic energy ...	121
§ 18. Motion of a constrained point along a curve. Motion along a plane curve. Motion along a space curve. Motion of a heavy constrained point	123
§ 19. Motion of a constrained point along a surface	127
§ 20. Mathematical pendulum	129
§ 21. Equilibrium of a constrained point. Stable equilibrium. Equilibrium in a potential field	131

III. Dynamics of relative motion.

§ 22. Laws of motion	135
§ 23. Examples of motion. Advancing motion of a frame. Rotary motion of a frame	136
§ 24. Relative equilibrium. Relative equilibrium in a frame moving with an advancing motion	140
§ 25. Motion relative to the earth. Force of gravity. Magnitude and direction of the earth's force of attraction. Force of Coriolis. Deviation to the east of a falling body. Foucault's pendulum	144

CHAPTER IV. GEOMETRY OF MASSES.

I. Systems of points.

§ 1. Statical moments. Statical moment of a point. Statical moment of a system of points	151
§ 2. Centre of mass. Centre of mass of two systems of points. Plane system of points. Linear system of points. Centre of mass of two points. Symmetric systems of points	152
§ 3. Moments of the second order. Moment of inertia. Product of inertia. Radius of gyration. Concentrated mass. Moments of inertia with respect to parallel lines. Products of inertia with respect to parallel planes	157
§ 4. Ellipsoid of inertia. Principal axes of inertia. Determination of principal axes of inertia	161
§ 5. Second moments of a plane system	166

II. Solids, surfaces and material lines.

§ 6. Density. Calculation of mass. Material surface, material line	167
§ 7. Statical moments and moments of inertia. Centre of mass. Geometric solids, surfaces and curves. Guldin's rules. Moments of inertia and products of inertia	169
§ 8. Centres of gravity of some curves, surfaces and solids. Broken line. Triangle. Trapezoid. Polygon. Sector of a circle. Segment of a circle. Prism. Cylinder. Pyramid. Cone	175
§ 9. Moments of inertia of some curves, surfaces and solids. Segment. Rectangle. Square. Trapezoid. Triangle. Parallelogram. Rectangular parallelepiped. Circumference of a circle. Circle. Surface of a sphere. Sphere. Cylinder of a revolution. Cone of revolution	179

CHAPTER V. SYSTEMS OF MATERIAL POINTS.

§ 1. Equations of motion. Unconstrained systems. Internal and external forces. Equilibrium of a system of points. D'Alembert's principle. Constrained systems. Rigid system. Atwood's machine	186
§ 2. Motion of the centre of mass. Kinematic properties of the centre of mass. Resultant of a system of weights. Dynamic properties of the centre of mass ..	194
§ 3. Moment of momentum. Angular momentum with respect to a point. Angular momentum in an advancing motion. Angular momentum in a motion relative to the centre of mass. Angular momentum with respect to an axis. Dynamic properties of angular momentum. Motion in a gravitational field. Rotation of a system about an axis. Angular momentum in relative motion	198
§ 4. Work and potential of a system of points. Work. Work equal to zero. Potential of a system. Potential of the force of gravity. Potential of the internal forces	208

§ 5. Kinetic energy of a system of points. Kinetic energy of a system in an advancing motion. Kinetic energy in a rotating motion about an axis. Theorem of König. Principle of the equivalence of work and kinetic energy. Kinetic energy in relative motion	214
§ 6. Problem of two bodies	221
§ 7. Problem of n bodies. Problem of three bodies	224
§ 8. Motion of a body of variable mass	227

CHAPTER VI. STATICS OF A RIGID BODY.

I. Unconstrained body.

§ 1. Rigid body. Rigid systems of material points	231
§ 2. Force. Point of application of a force. Moment of a force with respect to a point. Moment of a force with respect to an axis. Equilibrium of forces	232
§ 3. Hypotheses for the equilibrium of forces	235
§ 4. Transformations of systems of forces. Change of the point of application of a force. Law of composition and resolution of forces. Equipollent systems. Force couple. Reduction of a system of forces. Plane system of forces. System of parallel forces. Gravitational forces. Systems of couples. . . .	235
§ 5. Conditions for equilibrium of forces. Analytic form of the conditions for equilibrium. Plane systems of forces	244
§ 6. Graphical statics. String polygon. Composition of forces. String polygon. Resultant of a part of a system	249
§ 7. Some applications of the string polygon. Determination of the reactions at the points of support. Determination of the moment of forces. Determination of the centre of gravity and the statical moment of plane figures.	253

II. Constrained body.

§ 8. Conditions of equilibrium.	257
§ 9. Reactions of bodies in contact. Normal and tangential reactions. Supports. Centre of pressure. Reactions of a string	258
§ 10. Friction.	267
§ 11. Conditions for equilibrium not involving the reaction. Body with one fixed point. Body with a fixed axis. Plane motion of a body. Lever. Determination of the reactions acting on a fixed axis	270
§ 12. Equilibrium of heavy supported bodies. Body supported at two points. Body supported at $n > 2$ points	278
§ 13. Internal forces.	284

III. Systems of bodies.

§ 14. Conditions of equilibrium	286
§ 15. Systems of bars. Stresses in bars. Pin-connections. Systems of bars. Decimal balance	288
§ 16. Frames. Plane frame. Analytical method of determining stresses in a frame. Determination of stresses in a frame (by means of force diagrams). Determination of stresses by means of sections	294
§ 17. Equilibrium of heavy cables. Chain. Cable. Loaded cable	302

CHAPTER VII. KINEMATICS OF A RIGID BODY.

§ 1. Displacement and rotation of a body about an axis. Parallel displacement or translation. Rotation about an axis	307
§ 2. Displacements of points of a body in plane motion. Rotation about a point. I Theorem of Euler. Plane motion of a body	310
§ 3. Displacements of the points of a body. II Theorem of Euler. Chasle's theorem. Twist	312

§ 4. **Advancing motion and rotation about an axis.** Advancing motion. Rotation about an axis 318

§ 5. **Distribution of velocities in a rigid body.** Relations among the velocities of the points of a body. Velocities of points of a straight line and a plane. Instantaneous motion of a rigid body 321

§ 6. **Instantaneous plane motion.** Determination of the instantaneous centre of rotation 324

§ 7. **Instantaneous space motion.** Rotation about a point. Instantaneous motion in the general case. Velocity of transport. Instantaneous twist. Determination of the motion of a body 330

§ 8. **Rolling and sliding.** Curve of instantaneous centres. Cone of instantaneous axes. Surface of central axes 337

§ 9. **Composition of motions of a body.** Two simultaneous rotations. Composition of several simultaneous rotations. Relative motion of a body. Steady precession 342

§ 10. **Analytic representation of the motion of a rigid body.** Instantaneous angular velocity. Central axis. Plane motion. Euler's angles. Euler's angles in a steady precession 350

§ 11. **Resolution of accelerations.** Plane motion. Motion in space 357

CHAPTER VIII. DYNAMICS OF A RIGID BODY.

§ 1. **Work and kinetic energy.** Dynamical magnitudes. Work. Kinetic energy . 360

§ 2. **Equations of motion.** Motion of the centre of mass. Principle of angular momentum. Principle of kinetic energy. D'Alembert's principle. Advancing motion of a body. Conditions of equilibrium. Reactions of bodies in contact. Work of the friction 364

§ 3. **Rotation about a fixed axis.** Atwood's machine. Compound pendulum. Determination of the reaction on an axis of rotation. Axis of rotation as a central axis of inertia. Centre of percussion 374

§ 4. **Plane motion.** Plane motion of a plane figure. Plane motion of a body 385

§ 5. **Angular momentum.** Angular momentum with respect to the centre of mass of a body or with respect to its fixed point. Derivative of the angular momentum 393

§ 6. **Euler's equations.** Motion of an unconstrained rigid body 397

§ 7. **Rotation of a body about a point under the action of no forces.** Angular momentum and kinetic energy. Rotation about a spherical point. Rotation about a point whose ellipsoid of inertia is an ellipsoid of revolution. Determination of Euler's angles. Rotation of a body about a point in the general case 399

§ 8. **Rotation of a heavy body about a point** 406

§ 9. **Motion of a sphere on a plane** 409

§ 10. **Foucault's gyroscope.** Motion of the axis of symmetry in a meridional plane. Motion of the axis in a horizontal plane 412

CHAPTER IX. PRINCIPLE OF VIRTUAL WORK.

§ 1. **Holonomo-scleronomic systems.** Bilateral constraints. Unilateral constraints. Degrees of freedom of a system 418

§ 2. **Virtual displacements.** Point on a surface. Point on a curve. Holonomo-scleronomic systems. Bilateral constraints. Unconstrained rigid body. Fixed point. Fixed axis. Motion of a figure in a plane. Unilateral constraints 422

§ 3. **Principle of virtual work.** Virtual work. Unconstrained body. Body having a fixed point. Plane motion of a body. Body having a fixed axis. Body having a fixed axis of twist. Screw. Determination of stresses in the bars of a frame 434

§ 4. **Determination of the position of equilibrium in a force field.** Lagrange's multipliers 446

§ 5. **Lagrange's generalized coordinates.** Parameters of a system. Virtual displacements. Virtual work. Generalized forces. Conditions of equilibrium. Equilibrium in a potential field 451

CHAPTER X. DYNAMICS OF HOLONOMIC SYSTEMS.

§	1. Holonomic systems.	466
§	2. Non-holonomic systems.	467
§	3. Virtual displacements. Point on a surface. Point on a curve. Examples. Systems of points. Generalized coordinates	468
§	4. D'Alembert's principle. Equilibrium of forces. D'Alembert's principle ...	474
§	5. Work and kinetic energy in scleronomic systems	478
§	6. Lagrange's equations of the first kind.	480
§	7. Lagrange's equations of the second kind. Lagrange's equations in a potential field. Cyclic coordinates. Motion of a point on a surface of revolution. Spherical coordinates.	483
§	8. Hamilton's canonical equations. Scleronomic systems	498

CHAPTER XI. VARIATIONAL PRINCIPLES OF MECHANICS.

§	1. Variation without the variation of time. Variation of a function. Variation of an integral. Variation of a derivative. Variation of a compound function. Systems of points	504
§	2. Hamilton's principle. Actual motion. Comparative motion. Hamilton's principle for natural coordinates. Hamilton's principle for generalized coordinates. Hamilton's principle in a potential field. Holonomo-scleronomic systems in a potential field.	512
§	3. Variation with the variation of time. Variation of a function. Systems of points. Variation together with the variation of time of an integral	522
§	4. Maupertuis' principle (of least action). Hölder's transformation. More general form of Hamilton's principle. Maupertuis' principle	527
	<i>Appendix.</i> Ordinary differential equations of the second order with constant coefficients	534
	<i>Index</i>	537
